- Dimension: DB6 2800x1860 mm
- Thickness 18 mm
- Base: chipboard
- Edging: 22/42 mm, thickness 1 mm

The concept of producing ecological furniture boards is to use wood-based materials that have already been used, such as old furniture, wooden chairs or pallets, so there is no need to cut down new trees.

The entire board production process is an integrated and repeatable cycle, from collecting waste wood to recycling and transforming raw materials into a new and functional product.

Collection of Italian Furniture Boards

with a deep structure of 100% recycled wood

TECHNICAL INFORMATION

- deep wood structure
- synchronous decor
- warehouse offer, available from 1 piece
