

# DECORATIVE **FURNITURE PANELS**

## WHY US?

### **EXPERIENCE**

Long-standing German practice in the production of furniture components, continued by a Polish company for over a decade.

### **PRODUCT DEVELOPMENT**

Constantly striving to improve products and their production processes. Searching for unique materials not available anywhere else.

### **IDEAS**

An extensive sales network on international markets and a carefully considered selection of material suppliers are a source of inspiration and experience both in terms of products and trends, as well as marketing and sales strategies.

### **PRESENCE IN POLAND**

Due to our warehouses and production facility in Poland, we perfectly combine German “know-how; with the flexibility that is critical on the market.

### **ECO-AWARENESS**

With regard the environment and its resources, we are gradually introducing pro-ecological changes in the organization and operation of the company and expanding our offer to include recycled products.

## QUALITY FUNCTIONALITY DESIGN RELIABILITY

- THESE ARE THE MAIN  
ASSUMPTIONS OF THE  
NIEMANN BRAND!

Thanks to multiple years of experience across a variety of markets, Niemann has become an expert in custom solutions. Strong customer orientation requires constant observation of market trends - in terms of production techniques, but also design - colors, textures and patterns. High quality products, interesting design, punctuality and professional logistics - these are the advantages of the Niemann brand and the benefits for which customers choose our products.

# ACRYLUX BASIC

# N

MDF boards covered with a glossy acrylic laminate with a thickness of 0.6 mm. They are characterized by a perfectly smooth surface and standard scratch resistance. The back of the board is finished with a PP laminate - white or color-matched with a thickness of 0.2 mm - according to the legend. It is possible to make a board covered with laminate on both sides. The Acrylux Basic collection is synonymous with style and quality as an alternative to varnished surfaces.

# ACRYLUX GLOSS

# N

MDF boards covered with high-gloss, hardened acrylic laminate with a thickness of 0.7 to 0.8 mm, which provides exceptional resistance to scratches, mechanical damage, chemical agents and UV radiation. The back of the board is finished with a PP laminate - white with a thickness of 0.4 mm or a color-matched one with a thickness of 0.2 mm - according to the legend. It is also possible to make a board covered with laminate on both sides. Decors from the Acrylux Gloss collection are characterized by a mirror effect, which optically enlarges the space and brings out the depth of color.

# ACRYLUX MAT

# N

MDF boards covered with a matt acrylic laminate with a thickness of 0.5 to 0.6 mm. Thanks to the hydrophobic properties of the Anti-fingerprint (AFP) surface, they are easy to clean - grease and liquids converge, and the number of "fingerprints" is reduced. They are characterized by high resistance to scratches, chemical damage and UV radiation. The back of the board is finished with a PP laminate - white with a thickness of 0.4 mm or a color-matched 0.2 mm - according to the legend. It is also possible to make a board covered with laminate on both sides. Acrylux Mat is the perfect depth of color and a satin, matt finish.

# KRISTALL GLOSS / MATT

# N

An exclusive line of MDF-based furniture boards covered with a glossy (Kristall Gloss) or matt (Kristall Satina) 2 mm thick acrylic laminate giving the depth of glass. Due to the fact that it is shatterproof, it ensures ease of processing and safety. The back of the board is finished with a pearl HIPS laminate 2 mm thick in the color of the front or according to the color legend. The Kristall collection is aimed at the most demanding group of customers who are looking for innovative and unconventional solutions in the field of furniture.

# VISION MAT AFP

# N

MDF boards covered with a 0.3 mm thick matte PET laminate, with hydrophobic properties and a subtle satin finish. This is an innovative solution that is becoming increasingly popular in the furniture industry. The back of the board is finished with a PP backing laminate - white or color-matched, 0.2 mm thick - according to the legend. It is also possible to make a board covered with laminate on both sides. Choose this collection to give your interiors a modern and elegant look!

# VISION MAT METALLIC

MDF boards covered with a matt PET laminate with a thickness of 0.3 mm. The visual effect changes depending on the angle of incidence of light. Thanks to the matt and metallic surface, you can create unique furniture that will be characterized by high resistance to scratches, chemical factors, UV radiation and ideal color depth. The back of the board is finished with a PP laminate - white or color-matched with a thickness of 0.2 mm - according to the legend. It is also possible to make a board covered with laminate on both sides. Vision Mat Metallic decors are the perfect choice for those who seek harmony between functionality and aesthetics.

# VISION TEXTURE

MDF boards covered with 0.3 mm thick PET laminate, distinguished by a delicate and subtle surface texture resembling fabric. The back of the board is finished with a PP backing laminate - white or color-matched 0.2 mm thick - according to the legend. It is also possible to make a board covered with laminate on both sides. Boards from the Vision Texture collection, thanks to their unique texture, will give the furniture a unique character and make it the focal point of any room.

# SPECTRUM GLOSS

MDF board covered with melamine and transparent PET laminate with a thickness of 75  $\mu\text{m}$ , characterized by a gloss level exceeding 85 glosses. This coating is resistant to scratches, chemical agents and UV radiation. It does not require the use of special maintenance agents. The back of the board is covered with melamine in the color of the front. Fronts made of Spectrum boards give interiors a modern character, combining simplicity of form with elegance and tasteful finish.

# SPECTRUM MAT

MDF or chipboard, covered with melamine and transparent, super matt PET laminate with a thickness of 75 µm, characterized by a gloss value below 15 glosses. Unlike traditional matt boards available on the market, Spectrum Mat is distinguished by a satin finish, which is pleasant to the touch. The back of the board is covered with melamine in the color of the front. These boards are available in interesting colors, are scratch-resistant and "fingerprint-resistant", making them an excellent material for kitchen cabinet fronts.

# SPECTRUM METAL

MDF board covered with PET laminate with an additional layer of metal. Spectrum Metal is a line of products available in the most desirable metallic shades: Copper, Gold and Titanium. The collection includes two types of surface finish: Smooth and Crumble (hammered). The board is characterized by increased resistance and is more economical compared to its natural counterparts, and its processing is extremely simple. The back of the board is finished with a 0.2 mm thick PP laminate in grey. Metal products are enjoying growing interest and are increasingly appearing in interior designs, giving furniture elegance and a sophisticated style.

# SAVIOLA 100% recycled wood

Melamine-coated chipboards, made of 100% recycled wood-based materials, are an innovative solution in terms of sustainable development. The entire production process of these boards is based on an integrated and repeatable cycle, which includes the collection of waste wood and its recycling, which allows the transformation of raw materials into a new, functional product, eliminating the need to cut down new trees. The collection includes decors with a deep wood structure, cement, as well as patterns resembling fabric or marble.

The edges are carefully matched in color and structure.

Economically and ecologically sustainable production process
